## ENVIRONMENTAL POLICY

## ENVIRONMENTAL POLICY

The path of sustainable development is based on a strong respect for the environment and on an increasing social responsibility - the pillars upon which Olímpio Miranda rests her economic growth.

We continuously work to reduce the environmental impact of our activity, either through a proper management of the consumption of natural resources, energy and raw materials, or through the monitoring of our emissions/consumption.

This vision has been transversal to the entire organization, from offices to production areas and logistics. We also share it in a socially responsible way with our partners and employees, helping to create a community more aware of the environmental problems in the challenges we share.

Olímpio Miranda is committed to conciliate the economic and social development with its environmental performance, and her commitment to her environmental policy is in accordance with the following principles:

- Compliance with the current legislation and applicable regulations, as well as with the internally defined environmental commitments;
- Minimization of the production of waste, promoting its valorization, ensuring that it is sent to the appropriate final destination;
- Promotion of practices for the rational and efficient use of resources using the best available techniques;
- Control of the energy and raw materials' consumption in order to reduce waste;
- Sensitize and train employees for environmental awareness, so that they adopt responsible behaviors and environmental practices;

Olímpio Miranda's basic principles of environmental management expressed in this Policy are acknowledged by her employees through internal disclosure.
